**Re: WT Docket No. 01-309
HAC Digital Wireless Telephones**

Fourth Semi-Annual Report

Dear Ms. Dortch:

The Filer, Uintah Basin Electronic Telecommunications d/b/a UBET Wireless, is the licensee of Cellular Radiotelephone Service Station KNKN236; and of Broadband Personal Communications Service ("PCS") Stations KNLG530, WPQZ730, WPQZ731 and WPSZ758. This report is submitted pursuant to the requirements of Paragraph Nos. 89 – 91 of the Commission's Report and Order (WT Docket No. 01-309), FCC 03-168, released August 14, 2003 ("R&O").

By way of background information, the Filer is a small, Tier III Commercial Mobile Radio Service licensee, as defined in the Commission's E-911 Order to Stay, FCC 02-210, released July 26, 2002. The Filer provides Frequency Block B cellular service to the B2 Segment of the Utah 5 – Carbon RSA; and Broadband PCS service within the Rock Springs, Wyoming, Grand Junction, Colorado, Denver, Colorado and Salt Lake City – Ogden, Utah BTAs. The digital portion of the Filer's cellular system employs the Time Division Multiple Access ("TDMA") air interface; and the Filer's Broadband PCS systems employ the Code Division Multiple Access ("CDMA") air interface. The Filer is in the process of overbuilding its cellular TDMA facilities with replacement CDMA facilities, although none of the cellular CDMA facilities are being placed into commercial service to date. The Filer currently markets a number of digital wireless telephones, the following of which meet a U3 (or M3) rating under ANSI Standard C63.19: a) Motorola Model V262; b) Motorola Model V265; c) Motorola Model V710; and d) Motorola Model T720. Upon information and belief, none of these four models meets a U3T (or M3T) rating under ANSI Standard C63.19.

To achieve compliance with the Hearing Aid Compatibility ("HAC") requirements of the R&O, the Filer has been and remains literally at the mercy of the handset manufacturers to develop and market HAC-compliant digital wireless handsets. As a small, Tier III wireless carrier, the Filer has had, and will have, no influence over

the product development and distribution decisions of wireless handset manufacturers; and, accordingly, relies on the manufacturers to develop HAC-compliant digital wireless handsets for use on the Filer's systems.

Given the foregoing, the information requested by the Commission is identified as follows:

Item 1 -- Digital Wireless Phones Tested: The Filer has not tested any digital wireless telephones for HAC compliance. All testing has been done (and, for future models marketed for the systems, will be done) by the handset manufacturers.

Item 2 -- Laboratory Used: None. See Response to Item 1.

Item 3 -- Test Results For Each Phone Tested: Not applicable. See Response to Item 1.

Item 4 -- Identification Of Compliant Phone Models and Ratings According To ANSI C63.19: As reflected on page 1 of this report, four digital wireless handset models marketed by the Filer meet a U3 (or M3) rating under ANSI Standard C63.19. Upon information and belief, none of these models meet a U3T (or M3T) rating under ANSI Standard C63.19.

Item 5 -- Report On The Status Of Product Labeling: None. Product labeling is presently being handled by the handset manufacturer, Motorola. It is anticipated that all product labeling for future HAC-compliant handset models activated on the system will be handled by the handset manufacturers.

Item 6 -- Report On Outreach Efforts: The Filer is developing a hearing aid compatibility information sheet to assist hearing impaired customers in selecting current model phones and accessories most suitable to their needs.

Item 7 -- Information Related To Retail Availability of Compliant Phones: See Response Item 4 regarding U3 (or M3) rated handsets. Upon information and belief, there are currently no handsets commercially available that meet a U3T rating under ANSI Standard C63.19.

Item 8 -- Information Related To Incorporating Hearing Aid Compatibility Features Into Newer Models Of Digital Wireless Phones: The incorporation of HAC features into newer models of digital wireless telephones will be accomplished by the handset manufacturers.

Item 9 -- Any Activities Related To ANSI 63.19 Or Other Standards Work Intended To Promote Compliance With The Requirements Of The Commission's Report and Order: None.

Item 10 -- Total Numbers Of Compliant And Non-Compliant Phone Models Offered As Of The Date Of This Report: See Response to Item 4. Four models meet a U3 (or M3) rating under ANSI Standard C63.19. The other (*i.e.*, non-HAC-compliant) handset models being marketed are the LG Model 6100, LG Model 5550, Kyocera Model KE494, Kyocera Model KX9c, Kyocera Model KX13, Kyocera Model KX1, Kyocera Model KX160, and Kyocera Model SE44; and none of these other models meet such a rating.

Item 11 -- Any Ongoing Efforts For Interoperability Testing With Hearing Aid Devices: Interoperability testing will be performed by the handset manufacturers.

Very truly yours,

Uintah Basin Electronic
Telecommunications d/b/a
UBET Wireless
